

Practical 2: Create an Amazon Product Card Using HTML and CSS

Problem Statement

Design a simple **Amazon-style product card** using **HTML and CSS**. The webpage should display multiple product cards arranged side by side using **CSS Flexbox**.

Each product card should contain:

- Product Image
- Product Title
- Product Rating
- Discount Badge
- Limited Time Deal
- Product Price
- Original Price (M.R.P)
- Delivery Information
- FREE Delivery Message

The cards should be displayed inside a **Flex Container** with proper spacing and should automatically move to the next line on smaller screens.

Algorithm

Step 1: Create an HTML document.

Step 2: Add a `<div class="container">` to hold all product cards.

Step 3: Create a `<div class="card">` for each product.

Step 4: Inside each card, add:

- Product Image
- Product Title
- Rating
- Discount
- Price
- Delivery Details

Step 5: Apply CSS styles for the card, image, text, and price.

Step 6: Use **Flexbox** to arrange the cards.

Step 7: Save the file and open it in a web browser.
