

What is GitHub?

GitHub is an online platform used to **store, manage, and share code**.

☞ It works using **Git**, which helps track changes in your code.

✓ **In simple words:**

- It is like **Google Drive for code**
- You can **upload projects, collaborate, and track versions**

Site URL : <https://github.com/>

📁 **GitHub Impact in Resume (Short Points)**

- Uses **GitHub** as a **portfolio** for your projects
- Shows **practical coding skills** (not just theory)
- Helps you **stand out in placements**
- Gives **real examples to explain in interviews**
- Proves **teamwork & collaboration experience**
- Shows **consistency** (via contribution graph)
- Builds **professional profile for recruiters**
- Useful for companies like **Infosys, Accenture**

☞ **One line:** GitHub = *Proof that you can actually build projects* 🚀

Two Ways to Upload Code to GitHub

✦ 1. Manual Upload (Easy Method)

Create a new repository

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#).
Required fields are marked with an asterisk (*).

1

General

Owner *

 Hari-krishnan-k

 /

Repository name *

Great repository names are short and memorable. How about [fluffy_winner?](#)

Description

0 / 350 characters

2

Configuration

Choose visibility *

Choose who can see and commit to this repository

 Public

Add README

READMEs can be used as longer descriptions. [About READMEs](#)

Off

Add .gitignore

.gitignore tells git which files not to track. [About .gitignore files](#)

No .gitignore

Add license

Licenses explain how others can use your code. [About licenses](#)

No license

Create repository

† using GitHub Copilot interaction data for AI model training unless you opt out. [Review this update](#) and manage your preferences in your [GitHub account settings](#).

Task_1/

Drag files here to add them to your repository

Or choose your files

Commit changes

Add files via upload

Add an optional extended description...

Commit changes

Cancel

Steps:

1. Open your repository in GitHub
2. Click **"Add file" → "Upload files"**
3. Drag and drop your files
4. Add a **commit message**
5. Click **Commit changes**

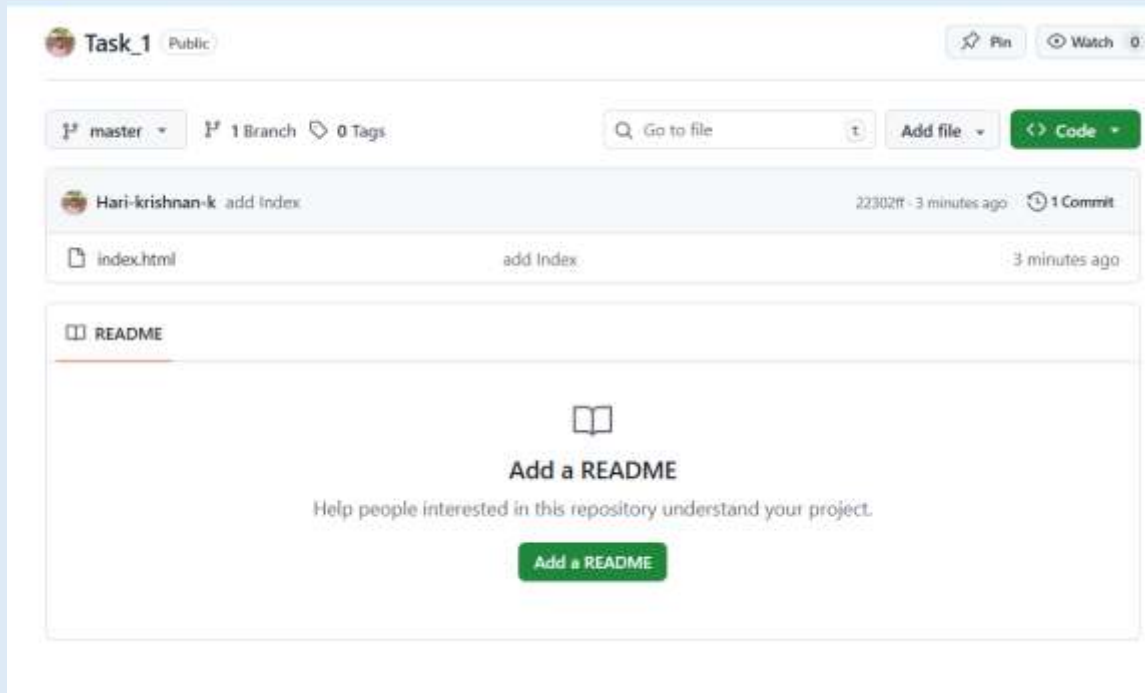

✔ Use this when:

- Small project
- No coding knowledge of Git
- Quick upload

2. Using Git Commands (Professional Method)

Git Commands – Simple Table

Command	Purpose	Simple Meaning
<code>git init</code>	Initialize repo	Start Git in your project
<code>git add .</code>	Add files	Select all files for saving
<code>git commit -m "msg"</code>	Save changes	Create a checkpoint with message
<code>git remote add origin <url></code>	Connect to GitHub	Link local project to GitHub
<code>git push -u origin master</code>	Upload code	Send code to GitHub

```
● PS C:\Users\Admin\Desktop\Dummy> git init
● PS C:\Users\Admin\Desktop\Dummy> git commit -m "add Index"
[master (root-commit) 22302ff] add Index
 1 file changed, 0 insertions(+), 0 deletions(-)
 create mode 100644 index.html
● PS C:\Users\Admin\Desktop\Dummy> git remote add origin https://github.com/Hari-krishnan-k/Task_1.git
● PS C:\Users\Admin\Desktop\Dummy> git push -u origin master
Enumerating objects: 3, done.
Counting objects: 100% (3/3), done.
Writing objects: 100% (3/3), 222 bytes | 37.00 KiB/s, done.
Total 3 (delta 0), reused 0 (delta 0), pack-reused 0 (from 0)
To https://github.com/Hari-krishnan-k/Task_1.git
 * [new branch]      master -> master
branch 'master' set up to track 'origin/master'.
○ PS C:\Users\Admin\Desktop\Dummy>
```

What is GitHub Deploy?

GitHub Deploy (GitHub Pages) is used to **host your website live on the internet**.

What is GitHub Pages?

GitHub Deploy means publishing your project as a **live website** using GitHub.

☞ With **GitHub Pages**, you can host:

- HTML
- CSS
- JavaScript

✓ Simple Definition:

It is a feature that **converts your GitHub repository into a live website**.

Steps to Deploy (Very Important)

★ Method: Using GitHub Pages

1. Open your repository in GitHub
 2. Go to **Settings**
 3. Click **Pages**
 4. Under **Source**, select:
 - Branch: `main` or `master`
 - Folder: `/root`
 5. Click **Save**
-

◆ Output (Final Result)

🔗 Your website will be live at:

`https://username.github.io/repository-name/`

Example:

`https://hari123.github.io/portfolio/`

◆ Important Notes

- ✓ Only **static websites** supported
 - ✓ `index.html` file is compulsory
 - ✓ Free hosting
 - ✓ No backend (no database, no server-side code)
-

◆ Where It is Used

- Portfolio websites
- Mini projects
- College project demo (NBA, expo)
- Resume hosting
